

Embedded C Programming Rapid Fire Sheet

Course: PG-DESD

Batch: March 2022

Module Name: Embedded C Programming

Rapid Fire Questions

1. Explain compilation and execution flow of C program?
2. What is the difference between declaration and definition? Explain in context of functions and variables.
3. Write a function to print fibonacci series using recursion?
4. What is significance of storage class? Which storage classes are in C? Explain static in context of functions and variables.
5. What is pointer? How and when const keyword is used with pointer?
6. What do you mean by dangling pointer and memory leakage? How to detect and avoid it?
7. What is the difference between passing argument by value and by address? Which type of arguments cannot be passed by value?
8. Which are function calling conventions in C? What is its significance?
9. What do you mean by structure member alignment, padding and data packing?
10. What is Array? Which are limitations of it? Why array index begins with zero?
11. Write a function to simulate string reverse and check whether string is palindrome or not?
12. What is the difference between macro and function?
13. What is the difference between structure and union?
14. What is function pointer? With example, explain how to declare and define function pointer?
