

MaxLinear Interview Questions

- storage classes? diff between various storage classes.
- volatile in C
- Compilation flow diagram in C
- How negative numbers are stored inside memory
- diff between structure and union
- what is structure padding? why it is used?
- diff between `#include""` and `#include<>`
- diff memory sections a program?(bss,data etc)
- what are Threads?
- what is a process?
- Diff between thread and Process?
- What are different process states
- IPC mechanisms
- what is context switching
- what are interrupts? how they are executed?
- diff between binary and counting semaphores.
- what are spinlocks.
- how child process is created?
- what is `fork()` system call? what it returns?(in child and parent context)
- what are zombie processes?
- what is an orphan process?
- how does a parent gets allocated to a orphan process.
- how resolution of logical address into physical address is done?
explain flow.
- what is virtual memory? how physical memory is mapped with logical memory.
- given a 32 bit system and size of 1 page(4kb), calculate how many no. of pages are there in the system.
- what is IOCTL?
- how the file is created in linux system, what are the components of a file.
- what is an Inode number.
- what are device trees?
- what is U-boot image?
- what are types of devices?(character/block) how they communicate with OS.
- What is ARP?
- diff between MAC and IP addresses.
- What is DHCP
- what is inheritance? types of inheritance.
- code - set/clear particular bit of a given number.
- code - find out the repetative numbers in an given array
- code - write a function to delete node at 5th position. take all the conditions into consideration.
- code - check the bit in a number, if set - do reset, if reset- do set.
- code - find out how many bits are set in a given number. also calculate time complexity of code.
