Ranking & Ordering

Tanuj is on the 9th position from upwards and on 38th position from downwards in a class. How many students are in the class?

- A. 47 B. 45 C. 46 D. 48

Ans: C

Type 1 - Total persons in a queue-

Total number of persons = [Position of person from upward/right + Position of person from downward/left] – 1

Ranking & Ordering

Type 1 - Total persons in a queue-

Total number of persons = [Position of person from upward/right + Position of person from downward/left] – 1

Q. Arush ranks seventh from the top and twenty-sixth from the bottom in a class. How many students are there in the class?

- A. 31 students B. 32 students C. 33 students D. 34 students

Ans: B

- The whole class consists of:

So, total students = (6 + 1 + 25) = 32 students.

Total students = [Position of person from upward/right + Position of person from downward/left] – 1

$$\begin{aligned}\text{Total students} &= [7 + 26] - 1 \\ &= 33 - 1 \\ &= 32 \text{ students}\end{aligned}$$

Ranking & Ordering

Type 2 - Rank of person in a queue-

Position of person from upward = [total number of persons – position of person from down] + 1

Position of person from downward = [total number of persons – position of person from up] + 1

Position of person from right = [total number of persons – position of person from left] + 1

Position of person from left = [total number of persons – position of person from right] + 1

Q. Ravi is 7 ranks ahead of Sumit in a class of 39. If Sumit's rank is seventeenth from the last, what is Ravi's rank from the start?

- A. 14th B. 15th C. 16th D. 17th

Ans: C

- Sol.
- So, Ravi is 24th from the last.
- |-----| Ravi |-----| Sumit |-----|
- ? 6 16
- Ravi's rank from start = $[39 - 17 + 7] + 1 = 15 + 1 = 16^{\text{th}}$
- So, Ravi is 16th from the start.

Position of person from upward = [total number of persons – position of person from down] + 1

Rank of Ravi from last(bottom) = $17 + 7 = 24^{\text{th}}$

Ravi's rank from start = $[39 - 24] + 1 = 15 + 1 = 16^{\text{th}}$

Type 2 - Rank of person in a queue-

Position of person from upward = [total number of persons – position of person from down] + 1

Position of person from downward= [total number of persons – position of person from up] + 1

Position of person from right= [total number of persons – position of person from left] + 1

Position of person from left= [total number of persons – position of person from right] + 1

Ranking & Ordering

- Type 3 – when two persons change their rank in a queue
- If two persons are on a definite position from up and down(or left and right) and they interchange their ranks, then Total no. of persons in order = [present position of first person + previous position of second person] - 1

Ranking & Ordering

- A. 34 B. 35 C. 30 D. 37

Ans: C

$$\begin{aligned}\text{Total number of girls} &= [\text{present position of Sheena} + \text{previous position of Heena}] - 1 \\ &= [14 + 17] - 1 \\ &= 30\end{aligned}$$

Type 3 – when two persons change their rank in a queue

If two persons are on a definite position from up and down(or left and right) and they interchange their ranks, then

$$\text{Total no. of persons in order} = [\text{present position of first person} + \text{previous position of second person}] - 1$$

Ranking & Ordering

- Type 4 – when two persons change their rank in a queue
- Previous position of first person = Difference of two positions of second person + previous position of second person
- **OR**
- present position of second person = Difference of two positions of first person + previous position of second person

Ranking & Ordering

- A. 4th B. 14th C. 8th D. 12th

Ans: B

$$\begin{aligned}\text{Present position of Vinay} &= \text{Difference of two positions of Dipa} + \text{previous position of Vinay} \\ &= (13 - 5) + 6 \\ &= 14^{\text{th}}\end{aligned}$$

Type 4 – when two persons change their rank in a queue
